## Assignment 5

In this assignment, you'll be asked to predict reading scores using the ELS data.

1. Create a regression that predicts reading scores as a function of SES, using the training data.
2. Report the RMSE from a validation of your model using the testing data.
3. Add another covariate to your model from 1.
4. Again report the RMSE from a validation of your model using the testing data. Did you model improve? By how much?
